RESPONSIBILITY

Goal of the activity

The goal of the activity is to help the students develop their understanding of adjusting sounds and pictures and explore the applications of creating a video.

Creative aspects

Finally, the activity can help the students become more creative and be able to better problem solve in any problem that is related to sound and pictures.

Possibility of continuity of the work

Yes, it is possible for a FCIT Students to continue their project, because students can use GitHub in their graduate projects. GitHub is a great tool for students to collaborate on projects, store and share code, and track changes.

Documentation of the activity (pictures or videos)

Students can refer to our GitHub documentation to gain an understanding of how to use and implement our project, as well as acquire details on pictures, sounds, and videos.

Importance of the activity

The activity is important in helping the students gain a better understanding of picture, sound, and video production techniques and their applications, which can give them the skills to create engaging and effective pictures, sounds, and videos. Additionally, it can help the students develop their creativity and problem-solving skills.

Number of beneficiaries (the average assessment)

Number of beneficiaries (the average assessment) is 285 student from all the department.

Positive impact

Many students had limited knowledge about the workings of pictures and sounds, but after using our application, they had a better understanding of how these things work.

Overview of the activity

This activity involves the students adjusting sound and picture and exploring the applications of creating a video. Through this, the students can learn more about video production techniques, such as adjusting sound and picture and exploring the different applications of creating a video. Additionally, they can explore different applications of video, such as ball dropping and other special effects. Finally, the activity can help the students gain a better understanding of sound, picture, and video production and become more creative and be able to better problem solve.

Statistics of beneficiaries

The most students where learning new information about GitHub and how to implement it. So, most of the student want to use it in their graduate projects.

Target group

FCIT Students
